1. Limited warranty

Products manufactured by GRUNDFOS PUMPS CORPORATION (Grundfos) are warranted to the original user only to be free of defects in material and workmanship for a period of 24 months from date of installation, but not more than 30 months from date of manufacture. Grundfos' liability under this warranty shall be limited to repairing or replacing at Grundfos' option, without charge, F.O.B. Grundfos’ factory or authorized service station, any product of Grundfos' manufacture. Grundfos will not be liable for any costs of removal, installation, transportation, or any other charges which may arise in connection with a warranty claim. Products which are sold but not manufactured by Grundfos are subject to the warranty provided by the manufacturer of said products and not by Grundfos’ warranty. Grundfos will not be liable for damage or wear to products caused by abnormal operating conditions, accident, abuse, misuse, unauthorized alteration or repair, or if the product was not installed in accordance with Grundfos’ printed installation and operating instructions.

To obtain service under this warranty, the defective product must be returned to the distributor or dealer of Grundfos’ products from which it was purchased together with proof of purchase and installation date, failure date, and supporting installation data. Unless otherwise provided, the distributor or dealer will contact Grundfos or an authorized service station for instructions. Any defective product to be returned to Grundfos or a service station must be sent freight prepaid; documentation supporting the warranty claim and/or a Return Material Authorization must be included if so instructed.

GRUNDFOS WILL NOT BE LIABLE FOR ANY INCIDENTAL OR CONSEQUENTIAL DAMAGES, LOSSES, OR EXPENSES ARISING FROM INSTALLATION, USE, OR ANY OTHER CAUSES. THERE ARE NO EXPRESS OR IMPLIED WARRANTIES, INCLUDING MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, WHICH EXTEND BEYOND THOSE WARRANTIES DESCRIBED OR REFERRED TO ABOVE.

Some jurisdictions do not allow the exclusion or limitation of incidental or consequential damages and some jurisdictions do not allow limit actions on how long implied warranties may last. Therefore, the above limitations or exclusions may not apply to you. This warranty gives you specific legal rights and you may also have other rights which vary from jurisdiction to jurisdiction.
2. Symbols used in this document

- **Warning**
  If these safety instructions are not observed, it may result in personal injury.

- **Warning**
  If these instructions are not observed, it may lead to electric shock with consequent risk of serious personal injury or death.

- **Warning**
  The surface of the product may be so hot that it may cause burns or personal injury.

- **Caution**
  If these safety instructions are not observed, it may result in malfunction or damage to the equipment.

- **Note**
  Notes or instructions that make the job easier and ensure safe operation.

3. Introduction

These installation and operating instructions are a supplement to the installation and operating instructions for the corresponding standard CM (E) pumps.

For instructions not mentioned specifically in this manual, see the installation and operating instructions for the standard pump.

Grundfos CMBE is designed on the CME platform. CMBE operates at 4000 rpm producing a unique performance curve from the standard CME.

CMBE comes complete with 5 way tee, pressure tank, pressure sensor, pressure gauge, and non return valve.

CMBE has built-in dry run protection.

The pumps have a built-in PI controller and are set up with a pressure sensor enabling the control of the pump discharge pressure.

The pumps have been factory-set to constant-pressure control mode. The pumps are typically used to keep a constant pressure in variable-demand systems.

4. Approvals

**Drinking Water Certifications**

- **UL Electrical**
  1 x 230 V CMBE models: UL Listing for Packaged Pumping System

- **UL Electrical**
  1 x 115 V CMBE models: Motor is UL Recognized

---

**Warning**
If these safety instructions are not observed, it may result in personal injury.

**Warning**
If these instructions are not observed, it may lead to electric shock with consequent risk of serious personal injury or death.

**Warning**
The surface of the product may be so hot that it may cause burns or personal injury.

**Caution**
If these safety instructions are not observed, it may result in malfunction or damage to the equipment.

**Note**
Notes or instructions that make the job easier and ensure safe operation.
4.1 Delivery and handling

4.1.1 Delivery
Examine the pump carefully to make sure no damage has occurred during shipment.

![Diagram of CMBE](image)

4.1.2 Handling

**Caution**
The pump should remain the packing until installation.

The packing is specially designed to protect it from damage. During unpacking and prior to installation, make sure that the pump is not dropped or mishandled.

4.2 Applications

The CMBE is designed for domestic and commercial constant pressure applications.

4.2.1 Pumped liquids

The CMBE is designed for pumping water and other thin, non-aggressive and non-explosive liquids, not containing solid particles or fibers. If the pump has been used for dirty liquids; e.g., pool water, it must be flushed through with clean water immediately after use.

5. Installation

**Warning**
Installation and operation must comply with local regulations and accepted codes of good practice.

**Warning**
All electrical work should be performed by a qualified electrician in accordance with the latest edition of the National Electrical Code, local codes and regulations.

**Warning**
Verify that the electrical supply has been switched OFF before making any connections.
The pump should not be connected to the electrical system until it has been properly installed in the piping system.

We recommend that installation is carried out by skilled personnel with technical qualifications required by the specific legislation in force.
The term skilled personnel means persons whose training, experience and instruction, as well as their knowledge of the respective standards and requirements for accident prevention and working conditions, have been approved by the person in charge of plant safety, authorizing them to perform all the necessary activities, during which they are able to recognize and avoid all dangers.

5.1 Mounting
The pump must be secured to a solid foundation by bolts through the holes in the flange or the base plate.

5.2 Cable entries
The motor has four M20 screwed cable entries fitted with blind plugs from factory.
The following cable glands are included:
- 2 x M20 cable gland, cable diameter Ø5 mm
- 1 x M20 cable gland, cable diameter Ø7-14 mm.

5.3 Ensuring motor cooling

**Note**
In order to ensure sufficient cooling of the motor, the distance (D) between the end of the fan cover and a wall or other fixed objects must always be at least 2 inches (50 mm), irrespective of motor size. See fig. 1.

5.4 Outdoor installation
When installed outdoors, the motor must be provided with a suitable cover to avoid condensation on the electronic components. See fig. 2.

**Note** When fitting a cover to the motor, observe the guideline in section 5.3 Ensuring motor cooling.
The cover must be sufficiently large to ensure that the motor is not exposed to direct sunlight, rain or snow. Grundfos does not supply covers. We therefore recommend that you have a cover built for the specific application. In areas with high air humidity, we recommend that you enable the built-in standstill heating function.

5.5 Drain holes
When the motor is installed in moist surroundings or areas with high air humidity, the bottom drain hole should be open.
The enclosure class of the motor will then be lower. The open drain hole helps prevent condensation in the motor as it will make the motor self-venting and allow water and humid air to escape.
The motor has a plugged drain hole on the drive side. The flange can be turned 90° to both sides or 180°.

**Warning**
Installation and operation must comply with local regulations and accepted codes of good practice.

**Warning**
All electrical work should be performed by a qualified electrician in accordance with the latest edition of the National Electrical Code, local codes and regulations.

**Warning**
Verify that the electrical supply has been switched OFF before making any connections.
The pump should not be connected to the electrical system until it has been properly installed in the piping system.

We recommend that installation is carried out by skilled personnel with technical qualifications required by the specific legislation in force.
The term skilled personnel means persons whose training, experience and instruction, as well as their knowledge of the respective standards and requirements for accident prevention and working conditions, have been approved by the person in charge of plant safety, authorizing them to perform all the necessary activities, during which they are able to recognize and avoid all dangers.

5.1 Mounting
The pump must be secured to a solid foundation by bolts through the holes in the flange or the base plate.

5.2 Cable entries
The motor has four M20 screwed cable entries fitted with blind plugs from factory.
The following cable glands are included:
- 2 x M20 cable gland, cable diameter Ø5 mm
- 1 x M20 cable gland, cable diameter Ø7-14 mm.

5.3 Ensuring motor cooling

**Note**
In order to ensure sufficient cooling of the motor, the distance (D) between the end of the fan cover and a wall or other fixed objects must always be at least 2 inches (50 mm), irrespective of motor size. See fig. 1.

5.4 Outdoor installation
When installed outdoors, the motor must be provided with a suitable cover to avoid condensation on the electronic components. See fig. 2.

**Note** When fitting a cover to the motor, observe the guideline in section 5.3 Ensuring motor cooling.
The cover must be sufficiently large to ensure that the motor is not exposed to direct sunlight, rain or snow. Grundfos does not supply covers. We therefore recommend that you have a cover built for the specific application. In areas with high air humidity, we recommend that you enable the built-in standstill heating function.

5.5 Drain holes
When the motor is installed in moist surroundings or areas with high air humidity, the bottom drain hole should be open.
The enclosure class of the motor will then be lower. The open drain hole helps prevent condensation in the motor as it will make the motor self-venting and allow water and humid air to escape.
The motor has a plugged drain hole on the drive side. The flange can be turned 90° to both sides or 180°.

**Warning**
Installation and operation must comply with local regulations and accepted codes of good practice.

**Warning**

**Warning**
Verify that the electrical supply has been switched OFF before making any connections.
The pump should not be connected to the electrical system until it has been properly installed in the piping system.

We recommend that installation is carried out by skilled personnel with technical qualifications required by the specific legislation in force.
The term skilled personnel means persons whose training, experience and instruction, as well as their knowledge of the respective standards and requirements for accident prevention and working conditions, have been approved by the person in charge of plant safety, authorizing them to perform all the necessary activities, during which they are able to recognize and avoid all dangers.

5.1 Mounting
The pump must be secured to a solid foundation by bolts through the holes in the flange or the base plate.

5.2 Cable entries
The motor has four M20 screwed cable entries fitted with blind plugs from factory.
The following cable glands are included:
- 2 x M20 cable gland, cable diameter Ø5 mm
- 1 x M20 cable gland, cable diameter Ø7-14 mm.

5.3 Ensuring motor cooling

**Note**
In order to ensure sufficient cooling of the motor, the distance (D) between the end of the fan cover and a wall or other fixed objects must always be at least 2 inches (50 mm), irrespective of motor size. See fig. 1.

5.4 Outdoor installation
When installed outdoors, the motor must be provided with a suitable cover to avoid condensation on the electronic components. See fig. 2.

**Note** When fitting a cover to the motor, observe the guideline in section 5.3 Ensuring motor cooling.
The cover must be sufficiently large to ensure that the motor is not exposed to direct sunlight, rain or snow. Grundfos does not supply covers. We therefore recommend that you have a cover built for the specific application. In areas with high air humidity, we recommend that you enable the built-in standstill heating function.

5.5 Drain holes
When the motor is installed in moist surroundings or areas with high air humidity, the bottom drain hole should be open.
The enclosure class of the motor will then be lower. The open drain hole helps prevent condensation in the motor as it will make the motor self-venting and allow water and humid air to escape.
The motor has a plugged drain hole on the drive side. The flange can be turned 90° to both sides or 180°.
6. Electrical installation
Carry out the electrical connection according to local regulations.
Check that the supply voltage and frequency correspond to the values stated on the nameplate.

Warning
Do not make any connections in the terminal box unless the power supply has been switched off for at least 5 minutes.
Make sure that the power supply cannot be accidentally switched on.
The motor must be earthed and protected against indirect contact in accordance with local regulations.
If the power supply cable is damaged, it must be replaced by the manufacturer, the manufacturer’s service partner or a similarly qualified person.

The user or the installer is responsible for the installation of correct earthing and protection according to local regulations. All operations must be carried out by a qualified electrician.

6.1 Protection against electric shock, indirect contact

Warning
The motor must be earthed and protected against indirect contact in accordance with local regulations.

Protective-earth conductors must always have a yellow/green (PE) or yellow/green/blue (PEN) color marking.

6.1.1 Protection against mains voltage transients
The motor is protected against mains voltage transients in accordance with EN 61800-3.

6.1.2 Motor protection
The motor requires no external motor protection. The motor incorporates thermal protection against slow overloading and blocking.

6.2 Mains supply

6.2.1 Single-phase supply voltage
• 1 x 115 V - 10 %/+ 10 %, 60 Hz, PE.
• 1 x 200-240 V - 10 %/+ 10 %, 50/60 Hz, PE.
Check that the supply voltage and frequency correspond to the values stated on the nameplate.

If the motor is supplied through an IT network, a dedicated IT network motor should be used. Contact Grundfos.

1 x 115 V models
Connect plug and line cord on the pump to 1 x 115 V outlet from the electricity supply.

1 x 200-240 V models
The wires in the motor terminal box must be as short as possible. Excepted from this is the separated earth conductor which must be so long that it is the last one to be disconnected in case the cable is inadvertently pulled out of the cable entry.

When an earth leakage circuit breaker or ground fault circuit interrupter is selected, the total leakage current of all the electrical equipment in the installation must be taken into account.

Note
The user or the installer is responsible for the installation of correct earthing and protection according to local regulations. All operations must be carried out by a qualified electrician.
7. Operating conditions

7.1 Maximum number of starts and stops
The number of starts and stops via the power supply must not exceed four times per hour.
When switched on via the power supply, the pump will start after approx. 5 seconds.
If a higher number of starts and stops is desired, use the digital input for external start/stop when starting/stopping the pump.
When started via an external on/off digital input, the pump will start immediately.

7.2 Ambient temperature

7.2.1 Ambient temperature during storage and transportation
Minimum -22 °F (-30 °C)
Maximum 140 °F (+60 °C).

7.2.2 Ambient temperature during operation
Minimum -4 °F (-20 °C)
Maximum 113 °F (+45 °C) (115 V models).
Maximum 122 °F (+50 °C) (220 V models)
The motor can operate with the rated power output (P2) at 122 °F (50 °C), but continuous operation at higher temperatures will reduce the expected product life. If the motor is to operate at ambient temperatures between 122 °F and 140 °F (50 and 60 °C), an oversized motor must be selected. Contact Grundfos for further information.

7.3 Installation altitude

The motor must not be installed more than 6500 ft. (2000 meters) above sea level.
Installation altitude is the height above sea level of the installation site.
• Motors installed up to 3280 ft. (1000 meters) above sea level can be loaded 100 %.
• Motors installed more than 3280 ft. (1000 meters) above sea level must not be fully loaded due to the low density and consequent low cooling effect of the air. See fig. 9.

7.4 Air humidity
Maximum air humidity: 95 %.
If the air humidity is constantly high and above 85 %, the drain holes in the drive-end flange should be open. See section 5.5 Drain holes.

7.5 Motor cooling
To ensure cooling of motor and electronics, the following must be observed:
• Position the motor in such a way that adequate cooling is ensured. See section 5.3 Ensuring motor cooling.
• The temperature of the cooling air must not exceed 50 °C (122 °F) for 1x230V or 45 °C (113 °F) for 1x115V CMBE pumps.
• Keep cooling fins and fan blades clean.

7.6 Pumps with factory-fitted pressure sensor
The pressure sensor is fitted on the pump discharge side, and the pump is set to constant pressure.
In this control mode, the pump will adjust its performance, i.e. pump discharge pressure, to the desired setpoint (Hset). See fig. 10.

8. Startup
After having carried out the mechanical and electrical installation described in sections previously, proceed as follows:

8.1 Positive inlet pressure start-up procedure
1. Check that the precharge pressure in the diaphragm tank is 0.7 times the required discharge pressure (setpoint).
2. Ensure all valves on discharge side and suction side of pump are in open position.
3. Turn tap on discharge side of pump on allowing water to pass through pump.
4. Turn power on to pump and press start/stop button on pump to turn pump on.
5. Adjust the required setpoint pressure by using the up or down arrows on motor.

8.2 Flooded suction and suction lift start up procedures
1. Check that the precharge pressure in the diaphragm tank is 0.7 times the required discharge pressure (setpoint).
2. Use 10 mm allen wrench to remove vent plug on front of pump just above suction port.
3. Use funnel and fill water into pump through vent port. When water is no longer able to fill into pump, the pump is primed.
4. Reinstall vent plug. Be careful not to cross thread vent plug while reinstalling.
5. Ensure all valves on discharge side and suction side of pump are in open position.
6. Turn power on to pump and press start/stop button on pump to turn pump on.
7. 6. Adjust the required setpoint pressure by using the up or down arrows on motor.
9. User interfaces

Warning
The product may be so hot that only the buttons should be touched to avoid burns.

Pump settings can be made by means of the following user interfaces:

Control panel
- Standard control panel.
  See section 9.1 Standard control panel.

9.1 Standard control panel

Fig. 11 Standard control panel

<table>
<thead>
<tr>
<th>Pos.</th>
<th>Symbol</th>
<th>Description</th>
</tr>
</thead>
</table>
| 1    | 1      | Grundfos Eye  
Shows the operating status of the pump. See section 10. Grundfos Eye for further information. |
| 2    | -      | Light fields for indication of setpoint. |
| 3    |        | Changes the setpoint. |
| 4    |        | Enables radio communication with the Grundfos GO Remote and other products of the same type. |
| 5    |        | Makes the pump ready for operation/starts and stops the pump. |

- **Start:**
  - If the button is pressed when the pump is stopped, the pump will only start if no other functions with higher priority have been enabled.

- **Stop:**
  - If the button is pressed when the pump is running, the pump will always be stopped. When the pump is stopped via this button, the "Stop" text next to the button will illuminate.

9.1.1 Setpoint setting
Set the desired setpoint of the pump by pressing or . The light fields on the control panel will indicate the setpoint set.

Pump in constant-pressure control mode
The following example applies to a pump in an application where a pressure sensor gives a feedback to the pump. If the sensor is retrofitted to the pump, it must be set up manually as the pump does not automatically register a connected sensor.

Figure 12 shows that the light fields 5 and 6 are activated, indicating a desired setpoint of 72.5 psi (5 bar) with a sensor measuring range from 0 to 145 psi (0 to 10 bar). The setting range is equal to the sensor measuring range.

Fig. 12 Setpoint set to 72.5 psi (3 bar), constant-pressure control mode

9.1.2 Start/stop of pump
Stop the pump by pressing . When the pump is stopped, the "Stop" text next to the button will illuminate. The pump can also be stopped by continuously pressing until none of the light fields are on.

Start the pump by pressing or by continuously pressing until the desired setpoint is indicated.

If the pump has been stopped by pressing , it can only be given free to operation by pressing again.

If the pump has been stopped by pressing , it can only be restarted by pressing .

The pump can also be stopped with the R100, Grundfos GO Remote or via a digital input set to "External stop".

9.1.3 Resetting of alarms and warnings
A fault indication can be reset in one of the following ways:
- Via the digital input if it has been set to "Alarm resetting".
- Briefly press or on the pump. This will not change the setting of the pump.

A fault indication cannot be reset by pressing or if the buttons have been locked.
- Switch off the power supply until the indicator lights are off.
- Switch the external start/stop input off and then on again.
- With the R100/Grundfos GO Remote.
### 10. Grundfos Eye

The operating condition of the motor is indicated by the Grundfos Eye on the motor control panel. See fig. 13, pos. A.
