TYPE VSM/VSMS
VERTICAL SPACE MISER PUMPS
Close and Split Coupled
VERTICAL SPACE MISER
Type VSM (Close Coupled)
Type VSMS (Split Coupled)

SMALL FOOTPRINT FOR TIGHT SPACES
› Vertically mounted top suction/top discharge pump fits where many pumps won’t.

SIMPLIFIED INSTALLATION
› Same-size suction and discharge connections simplify piping.
› VSM/VSMS pumps don’t require grouting.

LOW LIFE CYCLE COST
› Contoured suction baffle provides laminar flow to impeller.
› Suction and discharge bends, eliminating the need for suction diffusers, angle type valves and/or elbows, which improves overall system efficiency.
› Short shaft with minimum overhang reduces shaft deflection and improves bearing and mechanical seal life.

EASIER SERVICE
› Top pull out design allows rotating assembly to be removed without disturbing the volute or piping for ease of maintenance and service.

RELIABILITY
› Double volute design helps to reduce radial thrust and prolong seal life.
› Ductile iron construction provides the highest nozzle load in the industry.

PRODUCT RANGE
› Sizes 4” to 10”
› Flows up to 4100 GPM
› Heads up to 400 feet
› Horsepower up to 125 hp
› Fluid temp up to 275°F

ACTUAL AVERAGE FLOOR SPACE SAVINGS
when compared to the Top 5 U.S. HVAC pump manufacturers (from 500 gpm to 3000 gpm)

- Inline Pumps (37%)
- Horizontal Split Case Pumps (75%)
- End Suction Pumps (50%)

% of area saved
TRUE OVERALL HIGH SYSTEM EFFICIENCY
The PACO VSM efficiency includes the losses in the suction and discharge nozzles. With Francis vane impellers and contoured suction vanes, the VSM provides high efficiency. For a true comparison of efficiencies with other manufacturers’ products, losses in suction guides or elbows (for all horizontal suction or discharge units) must be taken into consideration.

AVERAGE OVERALL SYSTEM EFFICIENCY

VSM/VSMS
Double Volute Design with Superior Advantages

- Longer life
- Lower maintenance
- Quieter operation
- Space-saving
- Low life cycle cost

Type VSM and VSMS pumps utilize a double volute design that offers a distinct advantage over single volute designs.

The double volute design incorporates two cutwaters located at 180°, which divide the flow into two geometrically similar regions of the volute. The resultant hydraulic forces within the pumps are equal and opposed. As a result, the net radial force is maintained at a very low level throughout the operating range of the pump, and shaft deflection is kept to a minimum.

A typical single volute pump is normally designed to operate at or near the best efficiency point (BEP). In actual application, many pumps stray away from BEP due to load variances and/or changes in the system head curve.

As single volute pumps begin to operate away from BEP, the resultant radial load increases dramatically, causing increased shaft loads, deflection, and vibration. Excessive radial loads can cause premature failure of the mechanical seal, bearings, and shaft.

A double volute design ensures that hydraulic radial loads are equal and opposed and thereby nullified. Pump operation remains stable throughout the entire performance curve, with minimal shaft deflection, prolonging seal, bearing, and shaft life.
TYPE VSM

Close Coupled

BRACKET AND SEAL HOUSING
- One piece
- Registered fit
- Eliminates machining tolerance stacking
- Provides positive placement
- Prolongs mechanical seal and bearing life

SHAFT SLEEVE
- Standard feature
- Isolates shaft from medium
- Protects shaft from corrosion

MOTOR
- Industry-standard JM frame motor

TYPE VSMS

Split Coupled

AXIALLY SPLIT COUPLING
- Rigid spacer type coupling design allows easy disassembling and replacement of mechanical seal without removing motor

STAINLESS STEEL SHAFT
- Eliminates possibility of oxidation

BRACKET
- Registered fit

MOTOR
- Industry-standard P Base motor
PACO TYPE VSM/VMS PUMPS – DESIGNED TO GIVE YOU

- Low life cycle and operating costs
- Increased floor space savings
- Longer mechanical seal, shaft, and bearing life
- Higher operating efficiency
- Ease in replacement
- Reduced installation and maintenance costs

IMPELLER
- Single suction cast bronze with Francis vanes
- Trimmed to exact customer conditions
- Static and dynamically balanced to ISO 1940-G3
- Hydraulically balanced to reduce thrust loads

MECHANICAL SEALS
- Match construction with site requirements
- Internal seals are available in various configurations and materials to meet the needs of the application

VOLUTES
- Made of ductile iron
- Flanges positioned to allow vertical piping
- Double volute design reduces radial loads, internal recirculation, and turbulence
- No need for horizontal suction pipe runs, elbows, suction guides, or discharge elbows

NAMEPLATE
- Non-corrosive and located away from insulated areas; contains all data necessary for ordering spare and replacement parts

BRONZE CASE WEAR RINGS
- Included as Standard
- Allows for simple and inexpensive renewal of “like new” operating tolerances, even after years of operation

DESIGN ADVANTAGES
- Integrally cast diffuser vane reduces pre-rotation and provides laminar flow into oversized impeller eye
- No need for external flow straighteners

PUMP STAND
- Made of ductile iron
- Designed with smallest possible footprint to support entire pump and motor
- No grouting requirements
VSM/VSMS

Vertical space miser pumps

Technical Data
Flow, Q: max 4,100 gpm
Head, H: max 400 feet
Fluid temp.: max 275°F
Working press.: 300 psi
HP range: 2 to 125
Discharge sizes: 4” to 10”

Applications
• Chilled water
• Condensed water
• Hot water
• Service water
• District heating systems

Optional
• Materials of construction
• Seal materials and configurations
• Motor enclosures

PACO PUMPS HAS YOU COVERED

PACO Pumps offers a full line of pumps to cover all your pumping needs. Visit www.pacopumps.com for information about all of our pumps plus an online selection tool, life cycle cost calculations, technical data, and CAD drawings.

PARTS & SERVICE

PACO Pumps is committed to excellence in after-sales service. Genuine PACO parts are pre-engineered and pre-packaged to simplify selection, ordering, and stocking. Virtually all required parts for PACO products are available as kits.
PACO Pumps are manufactured by Grundfos CBS Inc., a Grundfos company. PACO Pumps, originally named Pacific Pumping Company, was founded in San Francisco in 1907 and is now headquartered in Brookshire, Texas – with branch locations in California, Oregon, Washington, and Texas plus a nationwide distribution network and multi-plant manufacturing facilities.

We’re proud of providing quality pumps and equipment to the industry for over 100 years.

For more information, please visit us at www.pacopumps.com.
